Layer 8 Toolkit ®

Got the technology covered but your employees are still leaving the business at risk? Employee education is the next step.

Years of research and experience in delivering security programmes that result in changes in behaviour have enabled us to develop the Toolkit, to support you to protect your business from avoidable mistakes and activate your human firewall.

SECURITY

TALK SECURE

Imagine for a moment that your phone was stolen. That's bad enough. Now imagine that photos from your phone started appearing on Facebook. That's a nightmare.

Now imagine that your friends start contacting you to say they've been receiving scam emails, texts and phone calls that coincide with your loss. What a horrible mess.
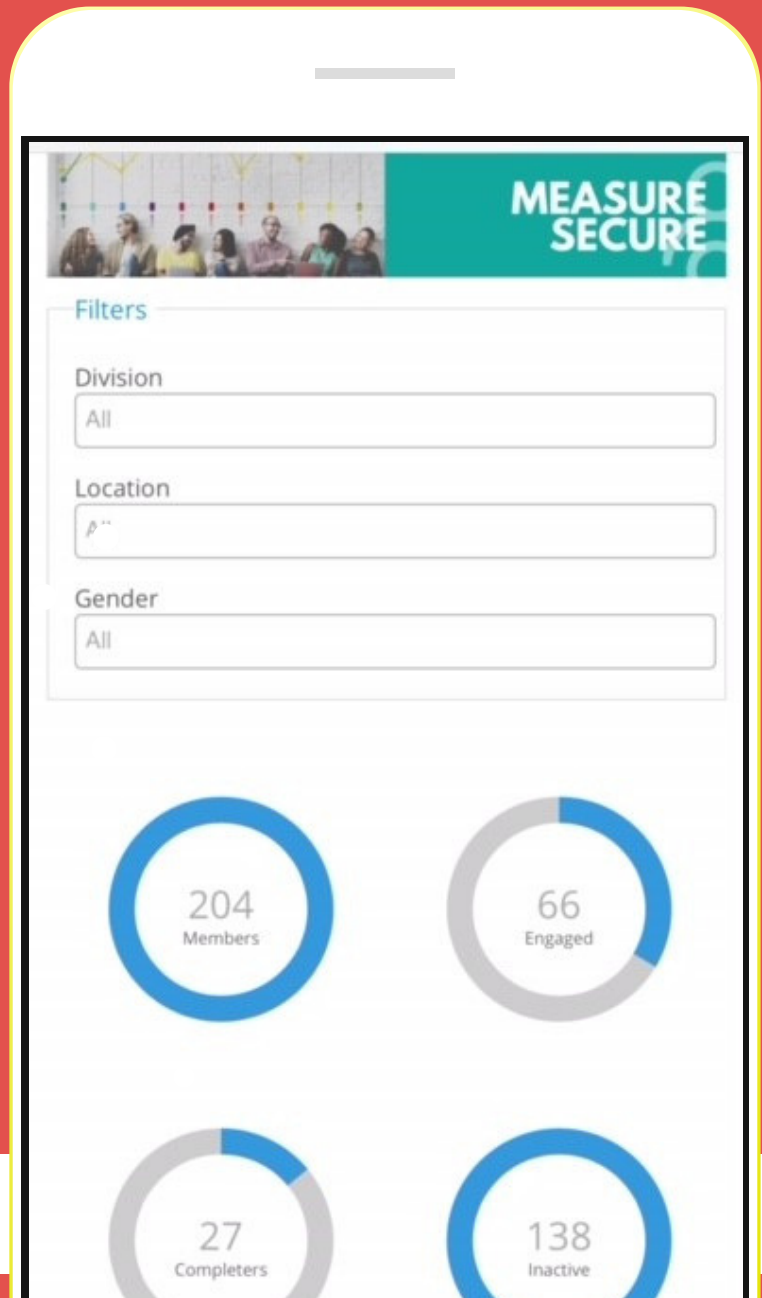

Make a list of all the people who could be affected if someone who shouldn't got into your phone. It would include your family, your friends, your colleagues, your customers. Then make surethat you know how to 'remote wipe' your device using Find my device (Android) or Find my iPhone(iOS)

TALK SECURE

Bitesized messages about key risks, threats and actions to put security on everyone's agenda.
